4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the leading species. Values are accurate to one decimal place. Site age source: estimated (E) is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees cannot present, e.g. non-forested polygons. SI is site association specific wherever previous inventories have data. Estimated fields in the data base are Inventory Type Group and SI Estimated source code.
