4d SITE INDEX
SI 50 are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the tallest trees in the stand. If the stand is younger than breast age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when suitable SI trees are not present, e.g. young stands (<30yrs). It is denoted by a stash which always follows the SI. The estimate is based on the site and inventory Type Group and SI if otherwise source code.
