4d SITE INDEX
Site Index is the height of the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX
An estimated site index is used when no permit present, e.g. young stands (<30yrs) - It is denoted by a slash which shows precision to 5. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
