4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. Site species is identified by one of the four leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees are not present, e.g. young stands (regen to 30 yrs). Site species is identified by previous 4. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
