4d SITE INDEX

All SI are known to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from ground information, a SI estimate will be made and recorded as an estimated SI (E) when silviculture data (Line 5) is entered.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees cannot present, e.g. previously harvested stands. Site Tools for Windows is used, which draws on the Forest Ecosystem Classification data to provide Biogeoclimatic Type Group and SI Estimated source code.
