4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. SI is based on the age and height of dominant trees. If the stand is younger than 50 years, SI is derived from age and height; estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees cannot present, e.g. Non-Forest, Non-Productive, or Forest types on which site trees are rare. provides 4 associated fields in the data base and an inventory Type Group and SI estimated source code.
