4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. Site curves are used for the major site leading species. Where an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees cannot present, e.g. young stands, or stands with a species composition which differs greatly from the species used for the site curves. Associated fields in the data base are Inventory provides it, Associated fields in the data base are Inventory Type Group and SI Estimated source code.
