4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. Site index curves are species specific. Site index is always estimated. Actual values can be obtained from age and height; estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees cannot present, e.g. young stands, deciduous, etc. The estimated SI is the value which provides it's associated fields in the data base and inventory Type Group and SI Estimated source code.
