2 Polygon Number and multi-layer stand indicator (L)
3 Species Composition
ex: the most important layer is described as Fd (Douglas Fir) and Hw (Western Hemlock)
4 Age, Height, Crown Closure Class Code - separated by a hyphen (-)
ex: stand is age class 2 (21-40 yrs); height class 1 (0.1-10.4m); crown closure class 1 (5-15%), SI 20m
5 Site Index - estimated or measured, species and curve
ex: a field polygon with no distinction between forbs and graminoids, shrubs less that 2m
6 Disturbance History & year - ex: Logged in 1978

Line 1 - History Record Opening Number:
opening number valid for BCGW mapsheet ZZZZ = opening number has not been assigned

Line 2 - Polygon No. / Multi-layer:
VRIMS Polygon Number - ranging from one to nine digits
No crossreferential relationship between an earth layer is available in the data base, i.e., 1,2)

4d SITE INDEX
All SI are known to the nearest metre referenced at 50 years
Site Index is the average height of the tallest trees in a stand, excluding leaning specimen. Where site index is not available it can be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when suitable SI trees cannot present, e.g. recently logged, burned, or young stands. SI is estimated from SI values in previous & associated fields in the data set, Inventory Type Group and SI Estimated source case.
