4d SITE INDEX

All SI are known to the nearest metre, referenced at 50 years breast height age. SI is estimated by the use of VDYP or other leading species. Where accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees exist present, e.g. Douglas-fir, Western Hemlock, Western Red Cedar. Species planted in a reasonable fashion in the Site Index Inventory Type Group and SI Estimated source code.
