4d SITE INDEX

50 SI at source is the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant trees. Site index curves are used to determine site index age and height, validated at a known site, or replaced by SI.

4e ESTIMATED SITE INDEX

SI is estimated when unable to have second present. e.g. young stands (<30yrs). It is denoted by a slash which always follows the species code. Example: Fd/ 30 Fd is estimated Type Group and SI estimated source code.
