4d SITE INDEX
Site Index is the nearest metre referenced at 50 years breast height age. SI is based on the age and height of the dominant trees on the stand and is given in the form of site age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when suitable SI trees aren't present, e.g. grasslands. Estimated SI is shown in brackets after the actual SI and replaces it. Estimated SIs in the data base are inferred by Type Group and SI Estimated source code.
