4d SITE INDEX

SI 20 is estimated to be exceed metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant and co-dominant trees. Site index is derived from tree age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable trees aren't present, e.g. young stands (<50yrs). It is denoted by a slash which always follows the estimated site index number. Refer to Inventory Type Group and SI Estimated source code.
