4d SITE INDEX

All SI are shown in the nearest metre referenced at 50 years breast height age. Site index is estimated for all stands with a leading species. Where an accurate SI cannot be determined, a default SI is assigned based on ecosystem or replicate the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when a stand does not meet the criteria for a reliable SI estimate (i.e. stand is too young). Estimated SI values are always identified in the Inventory Type Group and SI Estimated source code.
