4d SITE INDEX
Site index is based on the nearest metre referenced at 50 years Breast Height Age. It is based on the age and height of the leading species. When an accurate SI cannot be obtained from nearby stands, estimates based on site series may be used.

4e. ESTIMATED SITE INDEX
Estimated site index is based on site series and/or stand present e.g. young stand (Y), Mature stand (M), Old (O). For example a stand which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
