4d SITE INDEX
SI is site index to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the tallest trees in the stand. Site index is usually estimated from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX
SI is estimated when subscript E here and present, e.g. young stands (<30yrs). It is denoted by a dash which always follows the species code. Estimates are made by the Inventory Type Group and SI Estimated source code.
