4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. SI is estimated when suitable SI trees are not present, e.g. backlog species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aren't present, e.g. backlog species. Site Index Curves for the Province are used as a guideline. If recorded fields in the data base are Inventory Type Group and SI Estimated source code.
