4d SITE INDEX

50 Site index is the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant and co-dominant trees in the main canopy. Site index is estimated when stand is between 30 and 70 years old. Site index is not recorded for stands younger than 30 years or older than 70 years.

4e. ESTIMATED SITE INDEX

E SI is determined when site trees are present, e.g. young stands (<50yrs). It is denoted by a slash which always precedes the estimated site index value. Refer to Inventory Type Group and SI Estimated source code.
