4d SITE INDEX
Will be site specific, the nearest metre referenced at 50 years.
Where a site index is not known, the age and height of the leading species. When an accurate SI cannot be obtained from age and height, estimated SI's are referenced to the nearest 5 m.

4e: ESTIMATED SITE INDEX
Where a site index is not known and no leading species present, e.g. young shrub or herb, or where a site index is absent, always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
