4d SITE INDEX
Site Index is the expected metre whitenood at 50 years breast height age. SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from ground sampling, estimates may be made from Appendix IV.

4e. ESTIMATED SITE INDEX
Site Index estimated using Appendix IV (if no stand present) e.g. young stands (<10yrs). It is denoted by a slash which always follows the species code. Estimated site index data base inventory type Group and SI combination code.
