Site Index is the expected trees reference at 50 years Breast Height Age. It is based on the age and height of the leading species. What an accurate SI cannot be obtained from ages and measurements other, or replaces that SI.

4e. ESTIMATED SITE INDEX
Estimated Site Index is the site index the polygon permit present. e.g. young stands (<40yrs). If a estimated is given it should match previous if. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
