4d SITE INDEX
50 Site Index is the expected metre referenced at 50 years breast height age. It is based on the age and height of the tallest trees in the stand. Site index curves are developed for a age and height, estimated for a chosen site or species for BC.

4e. ESTIMATED SITE INDEX
For estimated index values include the letter E before the young stands (<50yrs). It is denoted by a slash which always precedes the estimated site index value. Site Index values are found in Type Group and SI Estimated source code.
