4d SITE INDEX

Site index is the height of dominant trees referenced at 50 years of age for all species. The dominant tree species is listed in the leading species. When an accurate SI cannot be obtained from age and height measurements, a default value or estimate from

4e. ESTIMATED SITE INDEX

Estimated site index is the site index value (in metres) at 50 years, using a species code. If a site index is used which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
