4d SITE INDEX

All SI are shown as the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant and co-dominant trees. Site index is estimated from both age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aremnot present, e.g. young stands (<30yrs). It is denoted by a slash which always follows the species being estimated. SI values are inventory Type Group and SI Estimated source code.
