4d SITE INDEX

All SIs are given for the nearest metre referenced at 50 years breast height Age. SI is based on the age and height of the dominant and co-dominant trees. Site index is estimated from age and height, estimated SI is shown after, or replaces line SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aren't present, e.g. young stands (<30yrs). It is denoted by a slash which always precedes the estimated value. SI values that are inventory Type Group and SI Estimated source code.
