4d SITE INDEX
All SI are stored in the nearest metric referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant and co-dominant trees. Site index estimates from age and height, estimated or known,after, or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when volume SI Have stand present, e.g. young stands (<50yrs). It is denoted by a slash which always precedes the estimated site index. Estimated by inventory Type Group and SI Estimated source code.
