4d SITE INDEX

All SI are stored to the nearest metre referenced at 50 years breast height age. Site index is estimated for all stands meeting sampling criteria. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees arenot present, e.g. non-forested areas. Site index is also estimated when a different site index is required than the site index that are inventory Type Group and SI Estimated source code.
