4d SITE INDEX
All SI are shown to the nearest metric referenced at 50 years breast height age. SI is the average height that the dominant trees in a leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when suitable SI trees arenot present; e.g. Immature stands, Non-Fd, Hw, Ss leading stands. This code always precedes 5 Associated fields in the data base are Inventory Type Group and SI Estimated source code
