4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. SI is based on the age and height of the leading species, as and SI may be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated where suitable SI trees were cannot present, e.g. young stands (<60yrs). An estimated SI is identified by slash which always follows the species code (Fd/). SI is estimated from base ass inventory Type Group and SI Estimated source code.
