4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant trees. SI values are derived from a table based on age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when subjects SI trees cannot present: e.g. young stands (<30yrs). It is denoted by a slash which always precedes the estimated site index. Site Index are Inventory Type Group and SI Estimated source code.
