4d SITE INDEX

Is the estimated site index in the nearest metre referenced at 50 years breast height age. SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

Is a subclassification of SI where several species are present. e.g. young stands (<30yrs). If a dominant by a stand which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
