4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. If the SI is estimated (i.e. from a site loss leading species), there an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees arenot present, e.g. recently logged. The SI is estimated from local site loss analysis provides it. Associated fields in the data base are inventory Type Group and SI Estimated source code.
