4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant trees. The SI may be estimated or derived from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees cannot present, e.g. young stands (<60yrs). It is denoted by a dash which always precedes the estimated SI. SI is derived in base on Inventory Type Group and SI Estimated source code.
