4d SITE INDEX
All SI are shown to the nearest metre referenced at 50 years breast height age. If the site species is not listed in the leading species, then an assumed SI cannot be obtained from age and height; estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX
SI is estimated when suitable SI trees arenot present, e.g. non-forested sites. The SI is the average for the basic which always contains it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
