4d SITE INDEX

SI (Site Index) is the nearest metre referenced at 50 years breast height age. SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e: ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aren(t present, e.g. young stands (<30yrs). It's denoted by a slash which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
