This map is created from information stored digitally in the BC Geographic Warehouse. The map has been structured to display the vegetation resource inventory (VRI) and forest cover (FC) information. Other resource information portrayed may not be complete and up to date. Cadastral, administrative boundaries and the Ownership colour theme are derived from the Integrated Cadastral Fabric (ICF) as of January 2014.

Site Index is based on the nearest metre referenced at 50 years breast height age. It is based on the age and height of the dominant and co-dominant trees. Site index is estimated by a variety of methods. Age and height, estimated for a known offset, or replaces the SI.

4e ESTIMATED SITE INDEX
Estimated site index is based on the species listed and the biogeoclimatic unit (BEC) in which the polygon occurs. Site index is estimated by a variety of methods. Age and height, estimated for a known offset, or replaces the SI. Site Index Curves are developed by the Provincial Site Productivity Working Group and SI Estimated source code.
