4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. SI is usually estimated from the site's leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aren=t present, e.g. Immature stands (IMM), OLD, or CWD. Site trees are the trees always provides it. Associated Note in the data base are Inventory Type Group and SI Estimated source code.
