5 Vegetated Density Class (or Non-Forest/Productive Descriptor)
ex. 4 is the density class for open forest with trees and graminoids, shrubs less that 2m.
6 Disturbance History & year - ex. Logged in 1976

4d SITE INDEX

Site index is to the nearest metre referenced at 50 years breast height age. It is based on the age and height of the leading species. When an accurate SI cannot be obtained from age and height, estimated SI is known after, or replaces the SI.

4e ESTIMATED SITE INDEX

Estimated site index is used when a site index cannot present, e.g. young stands (<30yrs), if it is denoted by a slash which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
