4d SITE INDEX
All SI are shown to the nearest metre referenced at 50 years breast height age. SI is based on the age and height of the dominant and co-dominant trees. If the polygon contains both inventory age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when available SI trees cannot present, e.g. young stands (<30yrs). It is denoted by a slash which always precedes the estimated source code. Refer to Estimated Site Index Type Group and SI Estimated source code.
