4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant layer. Site Index is the relationship between stem age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aannot present, e.g. young stands (<30yrs). It is denoted by a slash which always precedes the estimated site index. Site Index Source Inventory Type Group and SI Estimated source code.
