4d SITE INDEX
All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant and co-dominant trees. Site index estimates are inventory age and height, estimated SI is shown after, or replaces the SI.

4e: ESTIMATED SITE INDEX
SI is estimated when suitable SI trees aremot present, e.g. young stands (<50yrs). It is denoted by a slash which always follows the estimated site index value. Estimates are Inventory Type Group and SI Estimated source code.
