4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. SI may be estimated by a variety of forest leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees cannot present, e.g. Non-Forest, Alpine, Rock, Ice, Water, etc. SI is estimated always precedes it Associated Note in the data base are Inventory Type Group and SI Estimated source code.
