4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. SI is shown for the most dominant or major leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees arenot present, e.g. Immature stands, Non-Forest, Non-Productive. Estimated SI always precedes S. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
