4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant and co-dominant trees. Site index curves are inventory age and height, estimated SI is shown after or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated) when suitable SI trees aremot present, e.g. young stands (<30yrs). It is denoted by a slash which always precedes the estimated site index. Estimates are Inventory Type Group and SI Estimated source code.
