4d SITE INDEX

All SI are estimated. We nearest metre referenced at 50 years breast height age. If it is based on the age and height of the leading species. When an accurate SI cannot be obtained from age and height, estimated SI is known after, or replaces the SI.

4e ESTIMATED SITE INDEX

Estimated site index is used when site indices are almost present, e.g. young stands < 10yrs). If it is described by a dash which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
