4d SITE INDEX

Site Index is based on the nearest metre referenced at 50 years breast height age. SI is based on the age and height of the dominant trees in the stand. Site Index Curves are used. Site Index accuracy: age and height; estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

Estimated Site Index is based on the site series present, e.g. young stands (<60yrs). If a young stand is a seral which always occurs on poor sites, the estimated site index will be one site class poorer. Type Group and SI Estimated source code.
