This map is created from information stored digitally in the BC Geographic Warehouse. The map has been structured to facilitate the production of a hard copy product. Because of the inherent inaccuracies in digital information, this product may not be complete and up to date. 5 Estimated Site Index (SI) - if overstorey layer is described as above
ex. if both polygon no. distinction between fir/hw and green/woods, shrubs less that 2m.
6 Disturbance History & year - ex. Logged in 1978.

4d SITE INDEX

SI 50 at base age 50 is the nearest metre referenced at 50 years Breast height Age. SI is based on the age and height of the dominant and co-dominant trees. Site index curves are based on age and height, estimated SI is shown after an / separator in the SI.

4e. ESTIMATED SITE INDEX

E is indicated when values for trees were not present, e.g. young stands (<50yrs). It is denoted by a slash which always follows the species code and is followed by the estimated site index. Type Group and SI Estimated source code.
