4d SITE INDEX
Site Index is rounded to the nearest metre referenced at 50 years breast height age. SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from age and height measurements, please refer to Helpscreen 4d.

4e ESTIMATED SITE INDEX
Estimated Site Index is used when no reliable stand present, e.g. young stands (<30yrs). It is derived by a stand which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
