4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant and co-dominant trees. SI values are derived from age and height, estimated SI is shown after, or replaces the SI

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aren/st present, e.g. young stands (<30yrs). It is denoted by a slash which always follows the species code. Estimated SI values are inventory Type Group and SI Estimated source code.
