4d SITE INDEX

All SI are shown as the nearest metre referenced at 50 years.
Site Index (SI) is based on the age and height of the leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

Estimated SI is used when no measurements are present, e.g. young stands < 50yrs old. It is denoted by a slash which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
